INSTRUCTIONAL DESIGN TECHNOLOGY PROGRAM

Instructional Design Technology (IDT) Program

The IDT program introduces students to instructional systems design. In this program, students acquire professional competency to effectively and efficiently analyze, design, develop, implement, and evaluate multiple types of instructional solutions. This program uses a discovery-based learning approach where students receive individualized instruction combined with interactive eLearning and virtual coaching.

Students work on individual and team projects. The projects allow students the opportunity to apply the competencies and skills they have learned in a real-world context. Individual and team projects include applying the principles of instructional systems design to produce and deliver effective and efficient instructional products, programs, and service solutions for a real business client.

Students are required to publish community blogs, tutorials, demonstrations, and many other types of learning resources and collateral to connect, share, contribute, and interact with others in the learning community. Individual and team projects allow students to build their professional portfolio and résumé while engaged in real employer projects.

Courseware Materials

The list of courseware materials below are standard for every eCourse. Students must purchase required courseware materials and textbooks to successfully complete the program and earn the degree. These out-of-pocket expenses combined with residency and technology fees are in lieu of tuition. Our students do not pay tuition to take required courses in any degree program.

Instructional Design Technology (IDT) Program

eCourses

Every eCourse has two parts an eModule and eClass. Residency and Internship eCourses do not follow the same format since they are delivered on site at the selected campus.
